

**REPORT ON TESTING RESULTS, ANALYSIS AND
RECOMMENDATIONS FOR OPTIMISATION OF LEARNING
MATERIALS AND E-LEARNING PLATFORM**

Project: Construction-related Language Learning for Low-
skilled Migrant Workers (CoLa)

This project has been funded with support from the European Commission.
This report reflects the views only of the author, and the Commission cannot be held responsible for any use which may be
made of the information contained therein.

Content

1. Introduction of the project and the testing phase	3
2. Outcomes of the testing phase in partners' countries	4
2.1 Evaluation of the testing by mentors	4
2.2 Evaluation of the testing by language trainers/teachers	13
2.3 Evaluation of the testing by migrant students	22
3. Conclusions of the testing report and recommendations	34

1. Introduction of the project and the testing phase

Construction is staffed by high levels of migrant workers, particularly in Western European countries where it is proving increasingly difficult to recruit skilled and unskilled workers from the domestic market. Experts estimate that in partner' countries (Netherlands, Germany, Austria, United Kingdom, Spain and France), migrant workers represent about 50% of the whole workforce on construction sites.

CoLa project aims to develop language learning materials tailored to the specific needs of this group: low-skilled migrant workers, in three areas:

- Construction-specific language
- Language for health and safety
- Language for social interaction.

Within the framework of this project, partners have developed learning materials including videos and supporting text-based materials for each of the three areas, and an e-learning platform. These materials are available in all partners' languages (German, Spanish, English, Dutch and French) and are designed to be within levels A1/A2 of the Common European Framework of Reference for Languages (CEFR).

A questionnaire-based survey was created aimed to identify the positive and negative aspects of the CoLa materials and e-learning platform. The goal was to detect the problems or mistakes in these materials and solve them for the final version.

To do that, partners have sent these questionnaires to the target group (migrant construction workers) and also language trainers and mentors related to construction sector. These groups have tested the e-learning platform, the exercises, the videos and all the learning materials. After that, they have answered some questions about these materials, identifying the mistakes or problems and elaborating proposals and recommendations. Based on these evaluation results, partners have elaborated proposals for optimisation the learning materials.

In the testing have been involved three groups of participants: migrant students, trainers and mentors. The selection of the candidates for testing have been organised by each partner with the support of VET centres in construction/ counselling centres for migrants/migrants' associations/language schools/supervisors of construction sites/migrant community 'leaders' on construction sites. The testing phase has been carried out between December 2014 to May 2015.

The content of the assessment to be tested were three videos, the language exercises, glossaries and the usability in general of the e-learning platform. Moreover, partners asked for suggestions and recommendations to improve the platform.

This report summaries the national results of this testing phase and the conclusions and recommendations of the learning materials and e-learning platform.

2. Outcomes of the testing phase in partners' countries

The number of questionnaires received after the testing phase exceeds 400 and includes the three target groups: migrant students, trainers and mentors.

Respondents	Mentors	Trainers	Migrant learners
Austria	-	16	61
France	6	10	50
UK	5	5	52
Netherlands	5	10	51
Germany	11	8	51
Spain	5	13	50

Germany	35%	20%	25%	18%	2%
Spain	60%	20%	16%	4%	0%
TOTAL	41%	22%	18%	14%	5%

3. Conclusions of the testing results and recommendations

In general, the feedback is very positive, with a high rate of positive evaluation of the platform and the desire of continuing using it. The three groups agree that this tool is relevant for the target group and they appreciate all the materials. In fact, they ask for the development of other subjects of the construction sector.

Regarding the user-friendliness of the e-learning platform, the majority of the answers are positive. They like the content and the design. Also, they appreciate very much the help of the glossaries.

Students have shown a great interest in the idea of combining the language class with real construction situations.

Speaking about the design, they consider the platform as user-friendly or very user friendly. In fact, most interviewed students consider it rather easy to handle it and the content is quite clear. Nevertheless, they have identified some problems to move among sections or find the path to learning materials when they are doing the exercises. They suggested having more detailed instructions about the navigation in order to solve these problems.

Regarding the content, migrant students have a good perception about that. They have given useful advices about how to improve it; for example, adding a list with explanations of grammar and vocabulary; having the corrections in exercises in order to understand better the mistakes; including some exercises about how to improve the listening skill and pronunciation;... In addition, some of them consider that level is too high for them.

The main critics are related to some technical problems regarding the videos and the navigation of the e-learning. They recommend to improve the quality of the videos; trying to change the dubbing of voices in videos since they are disturbing for a good comprehension.

Mentors and language trainers evaluate well or very well the design of the platform and the learning materials

Concerning the relation between the learning materials and the construction sector, they think the topics are very relevant. Nevertheless, some mentors recommend adapting the videos and exercises to the construction types in each country since they consider some aspects do not represent a lot the style of the construction in their country.

Also, they consider it is necessary to join more links to the glossaries during lessons and connect the exercises and glossaries with videos. In order to assimilate well the concepts, exercises must focus on the concept themselves instead of the videos.

They propose links to other websites specialized in construction; dictionaries; and other sites to help the target group's profile.

Most of the student testing has taken place with the support of mentors or language teachers. According to them, it would be a little complicated to follow this e-learning platform without their guide for learners with a low level of the language. That is why they consider necessary to have more instructions.

In addition, some language teachers have remarked that the level of language is quite high in some videos and exercises for the target public (A1/A2). They recommend using subtitles or having the glossary list next to the videos in order to use it as students are watching the videos. Another idea is to make classifications of levels.

They appreciate glossaries and the images which increase the understanding of the words. However, they think glossaries must be more connected to other sections (links). Another idea is to add a dictionary that students can use during all the navigation.

Trainers agree with mentors regarding the difficulty of using this e-learning without the support of a teacher for a low-level student.

Also, they consider it would be useful to have a grammatical annex for students with the basic rules.

Taking into account the answers of three groups, the most important recommendations are the following:

- To facilitate the use of the navigation, creating manuals or instructions guides.
- To solve the technical problems in the e-learning platform regarding how to come back to other sections; to improve the quality of the videos (audio, voices); the problems to open some sections or downloading the assignments.
- To adequate the level of language; reducing the level in some exercises and adding more instructions and assistance tools that help users to understand the materials.

In general, the answers were very encouraging and it seems that the platform and the learning materials have achieved their objectives. Partners are willing to use these recommendations to improve the platform and the learning materials.
